ABSTRACT

A control system for programming an application program controlling a factory automation device on a communication network having a programming device operably connected to the communication network. A program package is embedded in the programming

5   device and is used for creating and editing the application program. At least one web page is resident on the programming device and operably connected to the program package. The web page is accessible to a user using a web browser to edit the application program controlling the factory automation device.
